## Abstract

**Abstract:** Although the Bio-Gravimetry presented herein is still a theory, its potential benefit to humanity would be enormous. An experimental proof would not only trigger a technological revolution but also demonstrate that consciousness is fundamentally and physically coupled with matter and gravitation—a scientific sensation that would initiate an immediate paradigm shift. This aspect alone gives the realization of the proposed experiments the highest priority and underscores the seriousness and profound significance of this research.

## Core of the HLV Theory

The Helix-Light-Vortex (HLV) theory is a comprehensive theoretical framework that aims to describe the fundamental building blocks of physics—space, time, matter, and consciousness—within a single, coherent model.

## 1 The Foundation of the Theory

- **Information Field**  $\Phi(x, t)$ : A universal information field forms the basis of the dynamics in the universe.
- **Emergent Properties**: Mass, spin, and charge arise as stable resonances of the  $\Phi$ -field within a quantized spatial lattice  $\varphi_G$ .
- **Spiral Time**  $\Psi(t) = t + i\phi(t)$ : A complex, dynamic time parameter responsible for nonlinearity, feedback, and quantization.

## 2 Consciousness and Bio-Gravimetry

- **Consciousness as a Structuring Agent**: Coherent neuronal states can actively modulate the  $\Phi$ -field.

- **Bio-Gravimetry:** Prediction of measurable effects such as  $\Delta g \neq 0$  and  $\Delta\phi_{\text{Spin}} \neq 0$  near coherent neuronal systems.
- **Gravitation as Information Pressure:** Gravitational effects arise as a gradient in the  $\Phi$ -field, not from mass.

### 3 Technological Visions

1. **Stage 1 – Bio-Quantum Interfaces:** Brain-field coupling for medical diagnostics and non-invasive control.
2. **Stage 2 – Spacetime Modulators:** Artificial  $\Phi$ -fields for the local control of inertia and structure.
3. **Stage 3 – Bio-Field Regulation:** External fields for healing or cognitive enhancement.
4. **Stage 4 – Quantum Communication:** Thought-induced information transfer through entanglement.

### 4 Experimental Predictions

- Gravitational and spin anomalies in neuronal cultures measurable with quantum gravimeters.
- Spiral time patterns in the cosmic microwave background (CMB).
- Axion-like quasiparticles in microwave cavities.

## Conclusion

The HLV theory offers a coherent, experimentally accessible framework for the unification of space, time, matter, gravitation, and consciousness. It provides both a fundamental re-definition of physical processes and concrete paths toward technological implementation. The author understands the realization of this vision not only as a scientific but also as a humanitarian obligation. Should the theory be proven true, the resulting technologies shall be used exclusively for the benefit of all humanity and be freely and gratuitously available to everyone.
